

PRODUCT DESCRIPTION

The L-BH Bag Housings are designed for industrial and commercial filter applications with viscous and highly contaminated liquids.

They feature heavy-duty 304 tL stainless-steel constructions for maximum durability and are a reliable solution for pre-, coarse and bulk liquid filtration.

Due to that optimized construction with heavy-duty swing bolt closure they are ideal for larger flow applications and offer low differential pressure. The different sizes of housings with various connections make it possible to adopt the filter system to exactly the needed requirements.

Due to the low profile a simple bag change is guaranteed.

The housing materials meet the requirements of the FDA (Food and Drug Administration), CFR Title 21, and (EC) No. 1935/2004 for food contact use.
